

Logic: propositional logic syntax

Propositional logic

- We begin with the syntax of propositional logic: what are the allowable formulas?

Syntax of propositional logic

Propositional symbols (atomic formulas): A, B, C

Logical connectives: $\neg, \wedge, \vee, \rightarrow, \leftrightarrow$

Build up formulas recursively—if f and g are formulas, so are the following:

- Negation: $\neg f$
- Conjunction: $f \wedge g$
- Disjunction: $f \vee g$
- Implication: $f \rightarrow g$
- Biconditional: $f \leftrightarrow g$

- The building blocks of the syntax are the propositional symbols and connectives. The set of propositional symbols can be anything (e.g., A , Wet, etc.), but the set of connectives is fixed to these five.
- All the propositional symbols are **atomic formulas** (also called atoms). We can **recursively** create larger formulas by combining smaller formulas using connectives.

Syntax of propositional logic

- Formula: A
- Formula: $\neg A$
- Formula: $\neg B \rightarrow C$
- Formula: $\neg A \wedge (\neg B \rightarrow C) \vee (\neg B \vee D)$
- Formula: $\neg\neg A$
- Non-formula: $A\neg B$
- Non-formula: $A + B$

- Here are some examples of valid and invalid propositional formulas.

Syntax of propositional logic

Key idea: syntax provides symbols

Formulas by themselves are just symbols (syntax).
No meaning yet (semantics)!

0	1	2	3	4	5	6	7
∅	△	▽	▽	▽	▷	▷	▷
8	9	A	B	C	D	E	F
◁	◁	└	└	└	└	└	└
I	J	K	L	M	N	O	P
□	□	□	□	└	└	└	└
S	T	U	V	W	X	Y	Z
▽	▽	▷	▷	◁	◁	△	△
c	d	e	f	g	h	i	j
└	└	└	└	└	└	└	└
m	n	o	p	q	r	s	t
└	└	└	└	└	└	▽	▽
w	x	y	z				
<	<	^	^				

- It's important to remember that whenever we talk about syntax, we're just talking about symbols; we're not actually talking about what they mean — that's the role of semantics. Of course it will be difficult to ignore the semantics for propositional logic completely because you already have a working knowledge of what the symbols mean.
